The intention is to preserve gaming history by preventing vintage games from being lost or forgotten. The aim of MAME is to be a referenceto the inner workings of the emulated arcade machines; the ability to actually play the games is considered "a nice side effect". Joystiq has listed MAME as an applicationthat every gamer should have.This app (MAME4droid 0.139u1) is a version of MAME for Android, is developed by David Valdeita (Seleuco) as a port of the MAME 0.139 emulator by Nicola Salmoria and theMAME team. It emulates arcade games supported by this version of MAME which includes over 8000 different ROMs.This version of MAME4droid was designed to be used with dual-core Android devices because it is based on the PC MAME version which requires higher specifications than theolder versions.Even with a high end device, do not expect "modern" arcade games from the 90s and beyond to necessarily work at full speed or compatibility. Some games like Outrun and theMortal Kombat series are badly optimized and require at least a 1.5ghz dual core device.With over 8000 games supported, some games will run better than others; some games may not run at all. It is impossible to support such a vast number of titles, so please do not email the developer asking for support for a specific game.This MAME4droid version uses only '0.139' romset.
